PRIVATE CUL-DE-SAC ROADS

SERVING 4 OR LESS SINGLE FAMILY RESIDENTIAL

NOTES;

1. THIS TYPICAL APPLIES ONLY TO PRIVATE CUL-DE-SAC ROADWAY WHERE THE TOTAL NUMBER OF PARCELS SERVED BY THE ROAD SHALL NOT EXCEED FOUR
2. PROFILE GRADE SHALL NOT EXCEED 15%
3. CERTIFICATION OF MATERIALS COMPLIANCE SHALL BE SUBMITTED TO THE COUNTY ENGINEER
4. PROJECT ENGINEER SHALL PROVIDE WRITTEN CERTIFICATION THAT ROADWAY IS CONSTRUCTED IN ACCORDANCE WITH THESE STANDARDS.
5. UPON WRITTEN NOTICE OF COMPLETION THE COUNTY ENGINEER SHALL MAKE A FINAL INSPECTION OF THE ROAD.
6. COUNTY WILL ASSUME NO RESPONSIBILITY FOR MAINTENANCE OF PRIVATE ROADS
7. CUL-DE-SAC BULBS SHALL HAVE A MINIMUM 40' SURFACE TURNING RADIUS.
8. AGGREGATE BASE - THICKNESS REQUIRED BY "R" VALUE TESTS.

CROSS-SLOPE DEFINITION

THE CROSS-SLOPE OF A LOT IS DEFINED AS THE AVERAGE SLOPE OF AT LEAST THREE CROSS-SLOPE LINES: ONE NEAR EACH LOT SIDE LINE AND ONE OR MORE IN THE MIDDLE OF THE LOT. A CROSS-SLOPE LINE IS A LINE ON A CROSS SECTION CONNECTING THE FINISHED CENTERLINE WITH A POINT ON THE LOT WHICH IS LOCATED BETWEEN THE SETBACK LINE AND A LINE AT LEAST 50 FEET BEHIND THE SETBACK LINE THAT WILL GIVE THE STEEPEST SLOPE.

EXAMPLES OF CROSS-SLOPE

NOTES

1. LOTS WITH MORE THAN 5 FEET OF CUT OR FILL ON THE STREET FRONTAGE WILL REQUIRE INDIVIDUAL COUNTY ENGINEER APPROVAL.
2. AT THE TIME OF SUBMITTAL OF THE IMPROVEMENT PLANS, THE DEVELOPER MUST BE PREPARED TO:
 - A. SHOW THAT A SUITABLE BUILDING SITE CAN BE MADE ON EACH LOT.
 - B. SHOW HOW VEHICULAR ACCESS CAN BE MADE TO EACH BUILDING SITE.
 - C. SHOW SUFFICIENT DRAINFIELD AREA TO MEET THE REQUIREMENTS OF THE HEALTH DEPARTMENT, OR GRAVITY ACCESS TO A COMMUNITY SEWER SYSTEM.

REV. NO.	DATE	BY	OIL & GREASE OR SAND & OIL INTERCEPTOR	DATE 1/07
				DWG. NO. 0941

TEHAMA COUNTY SERVICE AREA

OIL & GREASE INTERCEPTORS (OGI)

REQUIREMENT:

Oil and Grease Interceptors are required for all industrial and for commercial food establishments where pretreatment of wastewater effluent is indicated as necessary to capture greases, oils, or food solids.

This standard applies to all new construction, tenant improvements, remodels, and existing systems which are in need of upgrading.

OGI's will be sized from industry submitted, certified food preparation facility survey information. The sizing criteria will follow the Uniform Plumbing Code (UPC) appendix H. The interceptor size (in gallons) will be established by the formula below.

SIZING CRITERIA:

- (a) Parameters; The parameters for sizing a grease interceptor are hydraulic loading and grease storage capacity, for one or more fixtures.
- (b) Sizing Formula; The size of the interceptor shall be determined by the following formula:

Number of meals X waste flow X retention X storage = interceptor size
per peak hour* rate** time*** factor**** (liquid capacity)

* Meals Served at Peak Hour (or),
Total Seating Capacity

** Waste Flow Rate:

a.	With dishwashing machine	6 gallon flow
b.	Without dishwashing machine	5 gallon flow
c.	Single service kitchen	2 gallon flow
d.	Food waste disposer	1 gallon flow

*** Retention Times

Commercial kitchen waste dishwasher	2.5 hours
Single service kitchen single serving	1.5 hours

**** Storage Factors

Fully equipped commercial kitchen	8 hour operation : 1
	16 hour operation: 2
	24 hour operation: 3
Single Service Kitchen	1.5

TEHAMA COUNTY STANDARD PLANS

OIL & GREASE (OGI)
INTERCEPTOR SIZING

DATE
1/07

DWG. NO.
0941a

REV. NO.	DATE:	BY

The minimum size OGI allowed by the County is 1250 gallons. For very large OGI requirements the maximum size required will be established on a case by case basis. Adjustments for extenuating circumstances will include establishment of an agreed upon OGI maintenance (pumping) schedule, between the facility owner\operator and the County.

DESIGN

All new construction and upgrades, having an OGI requirement, shall be constructed to include a sample monitoring station.

Facilities required to install OGI's and/or sample monitoring stations, shall install units of approved designs on file with the County Construction Standards.

If an existing undersized unit is structurally sound and installed properly, then, in lieu of replacing it with a larger unit, the owner may choose to install an additional unit in series with the existing unit to satisfy the total size capacity required.

All required OGI's shall be installed and properly maintained with all internal required plumbing of proper design and length in place at all times.

Public Works Director

				DWG. NO. 0941b

TEHAMA COUNTY SERVICE AREA

SAND AND OIL INTERCEPTORS (SOI)

REQUIREMENT:

Sand and Oil Interceptors are required for industrial and commercial establishments where pretreatment of wastewater effluent is necessary to capture solids (sand, silts etc.) or floatables (oils etc.).

This standard applies to all new construction, tenant improvements, remodels, and existing systems which are in need of upgrading.

SOI's will be sized from industry submitted, certified Industrial Waste Survey information or by County field inspection data. The sizing criteria will follow the Uniform Plumbing Code (UPC) appendix I-9. The UPC does not specify requirements for all specific applications; however, The basic formula may be easily adapted to differing applications or parameters.

SIZING CRITERIA:

(a) Parameters; The parameters for sizing the SOI units are hydraulic loading, retention time, and storage factor for one or more fixtures or industrial applications.

(b) Sizing Formula; The size of the SOI will be determined by use of the following formula:

Number of units X waste flow X retention X storage = interceptor size
washed per hour* rate** time*** factor**** (liquid capacity)

* NUMBER of units washed per hour
(ie., auto's, engines, parts, etc.)

** Waste Flow Rate – gallons per unit cleaned (for intermittent use), or
gallons per hour (for constant use)

*** Retention Times 2.0 hours

**** Storage Factors – vehicle/equipment/parts, etc. washing

a.	Self service/public	1.5 hours
b.	Employee operated automated/commercial	2.0 hours
c.	Other industrial/commercial applications	2.0 hours

The minimum size SOI allowed by the County is 100 gallons. Adjustments for extenuating circumstances will include establishment of an agreed upon SOI maintenance (pumping) schedule, between the facility owner/operator and the County.

Public Works Director

TEHAMA COUNTY STANDARD PLANS

SAND & OIL (SOI) INTERCEPTORS SIZING

DATE
01/07
DWG. NO.
0941c

REV. NO.	DATE:	BY

DESIGN

All new construction and upgrades, where SOI's are required, such units shall be constructed to include a sample monitoring station.

Facilities required to install SOI's and/or sample monitoring stations, shall install units of approved designs on file with the County Construction Standards. The use of auxiliary or alternate pretreatment systems in conjunction with or in lieu of an SOI unit must be approved by the County prior to installation.

If an existing undersized unit is structurally sound and installed properly, then, in lieu of replacing it with a larger unit, the owner may choose to install an additional unit in series with the existing unit to satisfy the total size capacity required.

The standard SOI drawing (Figure 15-20) applies to units of 100 through 1,500 gallon capacity. Units over 1,500 gallon capacity must have at least 3 compartments.

All required SOI's shall be installed and properly maintained with all internal required plumbing of proper design and length in place at all times.

It is TCPW policy to permit mailboxes at safe locations that are convenient to mail carriers and at the same time not interfere with highway operations or signing. The following postal regulations apply to rural mail boxes:

Postal Manual

U.S. Postal Office Department Section 156.54--- Location

"Rural boxes must be placed so that they may be conveniently served by carriers without leaving their conveyances, and must be located on the right hand side of the road in the direction of travel of the carrier in all cases where traffic conditions are such that it would be dangerous for the carriers to drive to the left in order to reach the boxes, or where doing so would constitute a violation of traffic laws and regulations.

On new rural routes, all boxes must be located on the right of the road in the direction of travel of the carrier. Boxes must be placed to conform with State law and highway regulations. Customers must remove obstructions, including snow, that makes delivery difficult.

Supports of mailboxes should be breakaway. Generally, the wood support, if not with breakaway modification, should be no larger than 4"x4". Maximum diameter steel pipe, 1-1/2" I.D. Any other items are not acceptable. Multiple box installation will require an encroachment permit. These also apply to newspaper boxes. Additional shoulder area will be required per County Engineer. Contact Postal Service when Multiple Boxes are required.

TYPICAL MAILBOX LOCATION WITH FLOW LINE.
